

Exposure Management Platform

Exposure management that makes business sense

In today's rapidly evolving cybersecurity landscape, where threats grow more sophisticated by the day, the need for comprehensive protection of sensitive data and prevention of targeted attacks has never been more critical.

The Outpost24 Exposure Management Platform transforms the way organizations approach cybersecurity. Moving beyond traditional security measures, our platform offers a flexible and modular approach for a complete view that is perfectly aligned with your business objectives. Understanding and managing your organization's risk exposure is crucial, and without complete visibility of your attack surface and proactive vulnerability detection it's time consuming and costly to ensure your organization is continuously shielded from potential attacks.

Our platform is both flexible and user-friendly, providing complete visibility and actionable insights into your organization's attack surface and risk exposure. It features an intuitive interface that displays a risk criticality score empowering you with data-driven insights for business-centric risk mitigation. Enhanced asset discovery tools and threat intelligence give security professionals a clear view of risk exposure levels, facilitating informed decision-making and optimal deployment of security resources.

The modular design and user-friendly interface ensure seamless integration and provide actionable results from day one. For CISOs and executive leaders, our platform delivers enhanced visibility into your security posture, enabling a strategic approach to cybersecurity that not only protects your digital assets but also enhances your overall security resilience.

Key Use Cases

Enhanced Prioritization

In-depth threat context and insights into attack likelihood and leaked credentials to streamline the prioritization process. This ensures that teams focus on the most critical vulnerabilities first, optimizing remediation efforts.

Exposure Assessment

Conduct deeper assessments for business-critical applications, including unknown applications that may carry hidden risks. This focused approach ensures comprehensive security coverage and mitigates potential vulnerabilities before they can be exploited.

Complete Visibility

Enhanced visibility to distinguish between assets under management and unknown entities. This clarity allows for better control and management of all assets, reducing potential risks targeting your organization.

Expert Validation

Enhance your security measures by incorporating manual testing to mimic hacker behavior and validate your protective efforts. Ensure robust defense mechanisms by replicating real-world attack scenarios.

One Platform, One Vision

The Outpost24 Exposure Management Platform is a single platform for all the exposure management offerings Outpost24 has today and will add tomorrow. The platform integrations provide increased efficiency as well as flexible options that allow organizations to utilize just the solutions that make sense for their needs. With the Outpost24 Exposure Management Platform, you can be confident that your security efforts are perfectly aligned with your organization’s objectives and meet board-level expectations, ensuring thorough protection and strategic risk management.

Features

<p>Integrated Threat Intelligence Advanced risk scoring models to prioritize your security efforts ensuring you address the most critical threats first.</p>	<p>Automated Assessment Powered by customizable smart workflows and reporting, this ensures effective prioritization and timely vulnerability management.</p>	<p>Attack Surface Discovery Identify and monitor all assets for up-to-date protection and safeguard against ongoing and evolving cyber threats.</p>
<p>Flexible and Modular Design Modular, flexible platform that offers powerful and focused protection from day one.</p>	<p>Proactive Monitoring Continuous assessment and monitoring of security exposure to eliminate areas of known and unknown risks.</p>	<p>Reporting Facilitates communication and reporting to business stakeholders and maximizes security investment.</p>
<p>Unified Risk View Consolidation of security programs in one place for a holistic view of risk across your organization.</p>	<p>User Friendly Interface User friendly interface and APIs that help your team move faster and fix what really matters.</p>	<p>In-depth Validation Focus on real threats from validation against business and compensating controls.</p>

Embarking on or Re-energizing a CTEM program?

Outpost24 solutions enable organizations to achieve Continuous Threat Exposure Management.

By 2026, organizations that prioritize investments based on a CTEM program will be 3x less likely to suffer a breach (Gartner).
