

Specops First Day Password

Service Specific Terms

First Day Password is designed to enhance the security of passwords during the employee onboarding process. It allows organizations to move away from insecure methods of sharing initial passwords, such as plaintext via email or SMS, which are vulnerable to interception. Instead, new hires verify their identity and set their first password themselves, reducing the risk associated with traditional password sharing practices. This solution integrates with Active Directory, providing a seamless and secure experience for setting initial passwords.

First Day Password is made available as an add-on to Specops uReset under an annual subscription agreement. The subscription fee is determined by the number of enabled Active Directory user objects within scope of a Specops uReset Cloud Policy or Specops uReset Group Policy Object (GPO) across all affected domains, and covers all new users added to scope over the course of the subscription period.
